---

**MCLEAN, VA --** US manufacturing technology orders slid 12.2% from a year ago to \$370.62 million in January according to **AMT -- The Association For Manufacturing Technology.**

The total down 26.5% from December and down 12.2% from January 2012.

Year-to-date, orders are down 12.2% to \$370.62 million.

The data are based on reports from companies participating in the USMTO program.

“The drop-off between December and January is typical for technology orders, and it’s important to keep in mind that orders were exceptionally strong at the end of 2012, outperforming much of the broader economy,” said Douglas K. Woods, AMT President. “While the manufacturing economy continues to be strong, we may see its growth undercut by fiscal uncertainty due to the impact from sequestration.”

The United States Manufacturing Technology Orders (USMTO) report, compiled by the trade association representing the production and distribution of manufacturing technology, provides regional and national US orders data of domestic and imported machine tools and related equipment. Analysis of manufacturing technology orders provides a reliable leading economic indicator as manufacturing industries invest in capital metalworking equipment to increase capacity and improve productivity.

Manufacturing technology orders in the Northeast Region in January totaled \$50 million, down 34.1% from December and down 17% compared with January 2012.
